

ELECTRON CORRELATION IN METALS

K. YAMADA

Department of Physics, Kyoto University, Japan

Contents

<i>Preface</i>	<i>page vii</i>
1 Fermi gas	1
1.1 Metals	1
1.2 Free Fermi gas	2
1.3 Electronic specific heat and Pauli susceptibility	4
1.4 Many-body effect of electron gas	7
1.5 Exchange energy	10
1.6 Screening effect	13
1.7 Plasma oscillation	16
1.8 Ground state energy	18
1.9 Wigner crystal	20
2 Fermi liquid theory	22
2.1 Principle of continuity	22
2.2 Landau's Fermi liquid theory	25
3 Anderson's orthogonality theorem	29
3.1 Friedel sum rule	29
3.2 Orthogonality theorem on local perturbation	33
3.3 Photoemission in metals and the orthogonality theorem	36
3.4 Diffusion of charged particles in metals	41
4 s - d Hamiltonian and Kondo effect	49
4.1 Spin susceptibility of conduction electrons	49
4.2 s - d Exchange interaction and spin polarization	51
4.3 Kondo effect	54
4.4 Ground state of dilute magnetic alloy system	60
4.5 Scaling law of the s - d system	63
4.6 Wilson's theory	67
4.7 Fermi liquid theory by Nozières	68

5	Anderson Hamiltonian	72
5.1	Hartree–Fock approximation	72
5.2	Perturbation expansion with respect to V_{kd}	76
5.3	Green’s function	79
5.4	Perturbation expansion with respect to U	87
5.5	Exact solution of the Anderson Hamiltonian	99
6	Hubbard Hamiltonian	103
6.1	Basic properties	103
6.2	Theory of electron correlation	106
6.3	Infinite-dimensional Hubbard Hamiltonian	112
6.4	Mott transition	117
6.5	One-dimensional Hubbard model	119
6.6	Ferromagnetism of transition metals	120
6.7	Superconductivity in the Hubbard Hamiltonian	121
7	Fermi liquid theory of strongly correlated electron systems	122
7.1	Heavy fermion systems	122
7.2	Heavy fermions	123
7.3	Kondo temperature in crystalline fields	124
7.4	Fermi liquid theory on heavy fermion systems	127
7.5	Spin fluctuation and Fermi Liquid	141
8	Transport theory based on Fermi liquid theory	147
8.1	Conductivity	147
8.2	Optical conductivity	148
8.3	Hall conductivity	152
8.4	Cyclotron resonance	153
8.5	Magnetoresistance	157
8.6	Concluding remarks	158
9	Superconductivity in strongly correlated electron systems	159
9.1	Cuprate high-temperature superconductors	159
9.2	Anisotropic superconductivity due to coulomb repulsion	172
9.3	Electron-doped cuprates	206
9.4	Triplet superconductor Sr_2RuO_4	210
9.5	Conclusion	218
	<i>Appendix A. Feynman relation</i>	223
	<i>Appendix B. Second quantization</i>	224
	<i>Appendix C. Interaction representation and thermal</i>	
	<i>Green’s function</i>	226
	<i>Appendix D. Linear response theory</i>	233
	<i>Appendix E. Transport equation derived by Éliashberg</i>	238
	<i>Index</i>	243
